

PERSPECTIVES ON THE PETROTECHNICAL CLOUD

Arun MARAYANAN - SCHLUMBERGER

Abstract

Our vision around the Petrotechnical Cloud is to enable customers to leverage the efficiency of the cloud technologies to make better decisions by enabling analytics and mobility.

This talk will elaborate on how the key workflows add value to the decision making process and at the same time reduces the total cost of ownership of software and tools for the company. Not only are efficiencies gained, it is also now possible to gain a much deeper insight into the data and emerging trends using analytics and also allow for easier deployments with tablets and mobile devices.

We will also discuss some of the decision making processes that oil companies must use to deploy such technologies and also some of the proposed deployment methodologies.
